Microsoft 365 Security Assessment

How prepared is your business for a disaster or data loss catastrophe?

A security event can be detrimental to your business' bottom line. Secure and monitor your Microsoft 365 environment to guarantee all of your data and information is protected.

What We Do

We work together to determine your security score and detect just how secure your current Microsoft 365 environment is. In doing this, we uncover who has access to your Microsoft 365 internally and externally, expose any ransomware and/or malware, identify any compromised account credentials, and more.

How We Do It

Our Microsoft Solutions Partner for Security experts utilize Microsoft Secure Score to gather security insights and determine what security controls within Microsoft 365 are currently being utilized.

Deliverables

Security Remediation Roadmap

- Current Microsoft Secure Score summary
- List of remediation recommendations
- Ranking of severity & prioritization of remediation items
- Recommended quarterly update program

Step One

Execute an assessment and analysis of your current infrastructure to gain a mutual understanding of cloud security objectives and requirements.

Step Two

Provide your Microsoft Secure Score with tailored recommendations and best practices to successfully implement Microsoft 365 security features.

Step Three

Deliver a roadmap of Microsoft 365 security capabilities for your unique security objectives and requirements that will improve your Secure Score and your overall security posture.
