# Mobile Device Management

Powered by Microsoft Intune

## Simplify Management of Mobile Devices

The Sourcepass Mobile Device Management (MDM) solution, powered by Microsoft Intune, empowers businesses to efficiently manage corporate-managed devices while implementing effective Mobile Application Management (MAM) for Bring Your Own Device (BYOD) scenarios.

With the Sourcepass team guiding you, we streamline device management processes, enhance data protection, and ensure uninterrupted productivity.

### BYOD Benefits

With Mobile Application Management (MAM), your business can:

☑ Allow personal devices to access business resources without impacting private information

☑ Securely wipe business data from anywhere

☑ Prompt users to authenticate and restrict sharing of sensitive data

## Business Benefits

**Compliance & Security**

Manage compliance and security with granular control on any device without impeding end-users from performing their essential tasks.

**Controlled Access**

Prevent unauthorized access to business data by setting conditional access policies (e.g., multi-factor authentication requirements). Unsupported devices are blocked with prioritized data security measures.

**Insightful Reporting**

Stay on top of compliance and security with real-time data on all enrolled devices, such as compliance status, endpoint health checks, and reports on update failures.
