

Threat Monitoring & Response

The Sourcepass Security Information & Event Management (SIEM) solution, powered by Elastic, captures and analyzes data that enters your network to catch malicious threats that bypassed other preventative cybersecurity solutions.

This robust solution is backed by our in-house cybersecurity team, the Sourcepass Security Operations Center (SOC), that focuses on threat detection, response, and improving prevention capabilities by unifying and coordinating all cybersecurity technologies and operations.

Features

- ✓ Endpoint log visibility for Macs & Windows Devices
- ✓ Syslog Information Availability
- ✓ Flexible 30, 90, & 365-day log options
- ✓ Service-level objectives (SLOs) to meet your needs
- ✓ On- and off-premise deployment options

Our SIEM Solution Monitors and Analyzes All Data To Keep Your IT Secure

Visibility & Multi-Source Data Analytics

This solution provides real-time visibility and historical analysis across a distributed environment, enabling the detection of hidden threats.

Industry Regulated Compliance

This solution helps you meet industry compliance and regulatory (e.g., HIPAA) needs with flexible log capture, retention, and review features.

SOC Support & Services

Our SOC 2 Type II compliant environment is constantly monitored by our in-house cybersecurity team. We also implement software patches and security updates to ward off potential cyber attacks.
