

## Risk Assessments

### Overview & Key Benefits

As part of our Security suite, Sourcepass offers clients a security risk assessment to comprehensively review and test an organization's security controls and technologies. The assessment provides a snapshot of the overall security health of the environment. This helps organizations make informed decisions by exposing potential concerns and revealing inadequate controls, resulting in a plan of action for reducing risk.

**"68% of business leaders feel their cybersecurity risks are increasing with the reported rate of cyber attack occurrence at every 11 seconds."**

**Sourcepass works to make businesses smarter, more strategic, and better prepared to withstand a security threat.**

#### The Sourcepass Risk Assessment Process

- ✓ Identify threat events
- ✓ Identify vulnerabilities
- ✓ Determine the organization's inherent risk
- ✓ Identify security controls in place that reduce inherent risk
- ✓ Analyze security controls to determine residual risk
- ✓ Provide recommendations to reduce residual risk
- ✓ Generate a security roadmap to guide the organization to reduce risk levels and improve the organization's security posture

#### Answers Sourcepass Provides

- ✓ Is our network secure with the proper protections in place?
- ✓ What are the gaps that can help optimize our security and reduce organizational risk?
- ✓ Are there better, more efficient ways to improve our security posture and properly protect our organization?
- ✓ Do we fully understand the level of risk we are at and realize the potential harm that could result if we do not implement the recommended services and tools?
- ✓ What are the next steps?
